

A MECHANISM TO EXERCISE AND STRENGTHEN THE FACIAL MUSCLES THAT CONTROL AND FORM THE EMBOUCHURE

ABSTRACT: A mechanism to be grasped by the lips for the purpose of developing strength and endurance in muscles that control the embouchure. The mechanism consisting of a rigid segment **(20)** either made of or coated with a material suitable for use in the mouth **(10)**. The mechanism further consisting of a projecting segment capable of imparting an appropriate weight and torque to the segment which is held in the mouth. The projecting portion might support an additional weight that may be either fixed **(30)** or movable **(31)**.
